***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the present invention relates in general to telecommunications signal processing and more particularly to a system and method for providing video conferencing synchronization.

The prior art of record in combination or alone fails to teach or suggest these elements of the independent claims 1, 6, 8, 11, 13, 16 and 18 in combination with other elements. For example independent claim 1 has claim limitations such as the audio mixer operable to generate a mixed audio stream from the one or more incoming audio streams, the audio mixer operable to determine differences in the time base of each one of the one or more incoming audio streams and the time base for the mixed stream , the audio mixer operable to generate mapping parameters associated with the determined differences, the audio mixer operable to transform the timestamp of each of the one or more incoming audio streams to a corresponding output timestamp associated with the mixed audio stream according to the mapping parameters, video mixer operable to generate a mixed video stream from the one or more incoming video streams, the video mixer operable to receive the mapping parameters from the audio mixer, the video mixer operable to transform the timestamp of each of the one or more incoming video streams to a corresponding output timestamp associated with the mixed video stream according to the mapping parameters. Independent claim 6 has claim limitations such as receiving one or more incoming audio streams, each one or more incoming audio streams being associated with endpoint local timestamps, converting the endpoint local timestamps to endpoint network timestamps for each one of the one or more incoming

audio streams, generating a mixed audio stream from one or more incoming audio streams, the mixed audio stream having mixer network timestamps, determining mapping parameters associated with each incoming audio stream between the endpoint network timestamps and mixer network time stamps. Independent claim 8 has claim limitations such as generating a mixed audio stream from the one or more incoming audio streams, the mixed audio stream having mixer network timestamps, determining mapping parameters between the endpoint network timestamps and mixer network timestamps, comparing two sets of endpoint network timestamps to mixer network timestamps, identifying an offset and a scale factor as the mapping parameters in response to timestamp comparison. Independent claim 11 has claim limitation similar to independent claim 6. Independent claim 13 has claim limitations similar to claim 8. Independent claim 16 has claim limitations similar to independent claim 6. Independent claim 18 has claim limitations similar to claim 8. For the above reasons, independent claims 1, 6, 8, 11, 13, 16, 18 and dependent claims 2-5, 7, 9-10, 12, 14-15, 17, 19-20 are allowable.

2. Claims 1-20 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
